

# ADD MANAGED WAN SERVICES

Reduce the number of devices at the customer premises by side-loading other services onto the on-premises device.

## Increase value while decreasing complexity by adding complementary services onto the nodes.

Extend the technology to satisfy multiple customer requests and unique configurations.

Unlike many SD-WAN providers, by using our technology you have a better ability to satisfy unique customer requests and to support a customer's legacy WAN systems. The technology was built to be able to handle multiple additions of existing software packages.

Your customer can enjoy all of the benefits of its existing WAN, but with the added features of our technology – speed, reliability, quality, security and cost-savings.

### System Features:

- Single-Pane-of-Glass
- Open Architecture
- Debian Linux
- Application Programming Interface
- Containerization

### Customer Benefits:

- All-in-One Premises Equipment
- Robust Wide Area Network
- Single-Pane-of-Glass Management
- Software-Defined VNF additions

**About Us** - We make networking simple and reliable for organizations around the world. Our technology allows Enterprise and SMB customers to simplify the management of their WAN, increase site bandwidth, and mitigate the risk of downtime - all while relieving issues related to scale, security, and quality.
